                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Proteins with cell migration stimulatory activity used in treating wound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides a human migration stimulatory factor (MSF) protein. Host cells containing a replicable vector comprising the MSF encoding nucleic acid can be used for the recombinant production of the protein. The polypeptide can be used for modulating cell migration, healing a wound and for preventing scarring. Sequences AAV28902-906 represent peptide epitopes of MSF against which monoclonal antibodies that are specific to MSF and do not cross-react with fibronectin are

This is the 5' sequence of the clone insert
Clone from 8. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKEZ); Email 8 wiemannaGkfz- heidelberg.de;
sequenced by GBF (National Research Centre for Biotechnology Ltd.,
Braunschweig/Germany) within the cDNA sequencing consortium of the
German Genome Project.

This clone (DKFZp451P1415) is available at the RZPD in Berlin.
Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de.

Intramural Research Program, NIH (http://lgsun.grc.nia.nib.gov/cDNA). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1533-1558 (2001). [PMID: 115441991). Total RNAS were extracted from a pool of 3 embryos at 11:5-days postcoitum. Double-stranded cDNAs were synthesized with an Oligo(dT) primer [Invitrogen: PMA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker Li-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were purified by long-range high fidelity PCR using Ex Tag polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were diseated with Sall and Not! enzymes and cloned into Sall/Not! site of pCMV-SPORT6 plasmid vector. The DH108 E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 3.3Kb. The library was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AL589418

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 8,

                                                                                                                                                                                                                                                                                                                                                                                                                                             cell state; time-lapse profile; protein-protein interaction; drug screening; cancer; infectious disease; allergy; hypertension; hyperlipaemia; diabetes; cardiac disease; cerebral infarction; dementia; obsity; arteriosclerosis; infertility; mental disease; nervous disease; cataract; progeria; hypersensitivity; ultraviolet radiation; human; fibronectin 1; actin acting substance; transfection array; gene; ds.
         Proteins with cell migration stimulatory activity used in treating wound
                                                                  protein. Host cells containing a replicable vector comprising the MSF encoding nucleic acid can be used for the recombinant production of the protein. The polypeptide can be used for modulating cell migration, healing a wound and for preventing scarring. The present sequence represents the nucleotide sequence encoding a human MSF1-alpha protein
                                                                                                                                                                                                                                                          1 ProCysValleuProPheThrTyrAsnAspArgThrAspSerThrThrSerAsnTyrGlu
                                                           The invention provides a human migration stimulatory factor (MSF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Presenting a state of a cell, useful for diagnosing and treating

The specification describes a method and system for accurately presenting a state of a cell. The method comprises obtaining a time-lapse profile of the cell by time-lapse monitoring of a gene state associated with at least one gene derived from the cell, and presenting the time-lapse corprises a transcription control sequence, and the corprises a transcription control sequence, and the gene state includes expression of the gene. The method and system are useful presenting a state of a cell. The method can allow the elucidation of key protein interactions suitable for targeting by drug screening protocols. The method is useful for diagnosing or treating a classase, e.g. cancer, infectious disease due to viruses or bacteria, allergy, hypertension, hyperlipaemia, diabetes, cardiac disease, cerebral infarction, dementia, obesity, arteriosclerosis, infertility, mental and nervous diseases, cataract, progeria, or hypersensitivity to ultraviolet candiation. The present sequence encodes human fibronectin . Bovine fibronectin was used as a candidate for an acting substance. The actin acting substance was used with transfection reagents and amplified fibronectin was used with transfection arrays, in the course of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1075 CCATGTGTCTTACCATTCACCTACAATGGCAGGACGGACAGCACCACTTCGAATTATGAG 1134

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Proteins with cell migration stimulatory activity used in treating wound and preventing scarring.

Claim 18; Page 57; 86pp; English.

The invention provides a human migration stimulatory factor (MSF) protein. Host cells containing a replicable vector comprising the MSF encoding nucleic acid can be used for the recombinant production of the protein. The polypeptide can be used for modulating cell migration, healing a wound and for preventing scarring. Sequences AAY28902-906 represent peptide epitopes of MSF against which monoclonal antibodies that are specific to MSF and do not cross-react with fibronectin are raised

Lung cancer associated proteins represented in AAB58106 - AAB58548. Lung cancer casociated proteins and polymucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; antagonists may have neuroprotective; cytostatic; cardioactive; communomodulatory; muscular active general; vulnerary; gastrointestinal communomodulatory; muscular active; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein cor polymucleotide sequences. The lung cancer associated polymucleotide sequences may be used for detection of lung cancer, chromosome cor identification, as offromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases.

Communomodulatory and community of the indeptide AAB58549 are consecuted the invention for the identification and

The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or antisense therapy. They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records ABRS8278-ABRS8323 and ABRS8346-ABRS8362 represent polypeptides encoded by pluncleotides of the invention that are differentially regulated in breast cancer. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated human differentially-regulated breast cancer polynucleotide and polypeptide, useful for diagnosing, staging, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer.
                                                                                                                                                                                                                                         Breast cancer; cytostatic; gene therapy; antisense therapy; regulated; drug discovery; clinical medicine; forensic medicine; chromosome 2q35.

Patent No. 6682888

GENERAL INFORMATION:

APPLICANT: Loring, Jeanne F.

APPLICANT: Loring, Jeanne F.

APPLICANT: Edwards, Carla M.

TITLE OF INVENTION: GENES EXPRESSED IN ALZHEIMER'S DISEASE

FILE REPERENCE: PA-0024 US

CURRENT APPLICATION NUMBER: US/09/566,921

CURRENT FILING DATE: 2000-05-05

NUMBER: PERL PROGram

SEQ ID NO 135

LENGTH: 8044
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NAME/KEY: misc_feature

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                    The invention describes an isolated murine polynucleotide (1) comprising a contiguous stretch of at least 60 nucleotides of one of 265-677 and leaded 891 ownlesh gene trapped sequences (GTSB) (S), given in the specification. The novel genes and development of new therapeutic and diagnostic agents and methods. (I) is useful for identifying the coding regions of the murine genome, to isolate cDNAs, genomic clones, or full-length genes/polynucleotides or homologues, heterologues, paralogues, or cythologues that are capable of hybridising to one or more of the GTSs under stringent conditions. (I) can be incorporated into a phage display system that can be used to screen for proteins, or other ligands, that are capable of binding an amino acid sequence encoded by an oligonucleotide or polynucleotide sequence in at least one of the TS sequences. (I) is useful in addressable arrays, such as gene chips, to identify and characterise temporal and tissue specific gene expression, coidentify and characterise temporal and tissue specific gene expression, coidentify and characterise temporal and tissue specific gene expression, coidentify and characterise temporal and coinces and for genetic conjugations such as antisense inhibition and gene targeting. Decreasing the level of expression of (I) and/or down regulating the activity of peptides or proteins encoded by (I) is useful for treating development and cell differentiation disorders, aging, cancer, autoimmune disease, land and an unine cDNA isolated using gene trap
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; lung cancer associated protein; neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular active; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynecological; antibacterial; diagnosis; neural disorder; immune disorder; reproductive; proliferative disorder; wound healing; infectious disease; ds.

Polymucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins are persented in AAB58106 - AAB58548. Lung cancer associated proteins and polymucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; and cantagonists may have neuroprotective; cytostatic; cardioactive; and communomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial cetivity. The invention also includes antibodies specific for the protein or polymucleotide sequences. The lung cancer associated polymucleotide sequences may be used for detection of lung cancer, chromosome cor research purposes. The proteins may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, remal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polymucleotide sequences AAF18425 and populate AAB58549 are used in the course of the invention for the identification and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       507
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            20
                                                                                                                                                                                                                                                                                                                                                                                                                       Lung cancer associated gene sequences, referred to as lung cancer antigens, useful for treatment, prevention, and diagnosis of disorders such as lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       characterisation of the polynucleotide and protein sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cell state; time-lapse profile; protein-protein interaction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 867 BP; 195 A; 223 C; 268 G; 176 T; 0 U; 5 Other;

Comment=A number of isoforms are produced. Each of the "extra
domain" and the connecting strand 3 are present in some forms of
fibronectin and absent in others;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Name=1;
Isold=P07599-1; Sequence=Displayed;
Isold=P07599-1; Sequence=Displayed;
ISSUE SPECIFICITY: Plasma FN (soluble dimeric form) is secreted by hepatocytes. Cellular FN (dimeric or cross-linked multimeric forms), made by fibroblasts, epithelial and other cell types, is deposited as fibrils in the extracellular matrix.

PTM: Sulfated (By similarity).

SIMILARITY: Contains 12 fibronectin type I domains.
SIMILARITY: Contains 12 fibronectin type II domains.
                                                                                                                                       MEDLINE-87054047; PubMed-3780752; Skorstengaard K., Jensen M.S., Sahl P., Petersen T.E., Magnusson S.; "Complete primary structure of bovine plasma fibronectin."; Eur. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 12,

Sequence 78, Application US/09155613A

Patent No. 6420120

GENERAL INCOMMATION:

GENERAL INCOMMATION:

APPLICANT: Boulanger, Pierre

APPLICANT: Hong, 8sw See

APPLICANT: Karayan, Lucie

APPLICANT: Was of a Polypeptide as Cell Receptor for Adenoviruses

TITLE OF INVENTION: Use of a Polypeptide as Cell Receptor for Adenoviruses

FILE REFERENCE: 032751-036

CURRENT APPLICATION NUMBER: US/09/155,613A

CURRENT PILING DATE: 1998-01-30

PRIOR APPLICATION NUMBER: FY 97/01005

Proteins with cell migration stimulatory activity used in treating wound and preventing scarring.

Claim 18; Page 57; 86pp; English.

The invention provides a human migration stimulatory factor (MSF) protein. Host cells containing a replicable vector comprising the MSF encoding nucleic acid can be used for the recombinant production of the protein. The polypeptide can be used for modulating cell migration, healing a wound and for preventing carring. Sequences AAY28902-906 represent peptide epitopes of MSF against which monoclonal antibodies that are specific to MSF and do not cross-react with fibronectin are

The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's cateraction in the individual. The individual's cateraction in the individual in the individual in the individual in the individual in the individual. The invention curther comprises an isolated nucleic acid molecule comprising at least sentiture comprises an isolated nucleic acid molecule comprising at least sentiture comprises an isolated nucleic acid molecule comprising at least sentiture in the specification one of the nucleotides is an SNP given in the specification and manno acid sequence given in the specification, an antibody comprising an amplified polynucleotide or its antigen-binding fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in capering and supply and supply and supply and supply and supply and supply molecides in an enthod for identifying an agent useful in treating or preventing myocardial infarction. The novel detection method is useful in identifying an individual who has an increased or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction-associated gene containing one or more SNP's of the invention. Note: Thi sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   method is useful in identifying an individual who has an anacture of decreased risk for developing myocardial infarction and for preparing a decreased risk for infarction. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying an individual who has an altered risk for developing myocardial infarction by detecting a single nucleotide polymorphism in the individual's nucleic acids.
                                                                                                                                                                                                                                                                                                                                                         Myocardial infarction; detection; single nucleotide polymorphism; SNP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cancer tissue. Also described: (1) peptides and proteins (II) containing an amino acid sequence encoded by (I); (2) a method for diagnosing bladder cancer (BC), or monitoring its progression, that uses (I), (II) or agents (Z) that inhibit, or bind to, (I) or (II), labelled with a reporter; and (3) a method for treating BC that uses (I), (II) or (Z). (II) and (II) have cytostaric activity. (I) and (II) can be used to detect (and monitor progression of) bladder cancer (BC), or the risk of developing it; to screen for specific binding agents (Z), and to treat BC. (Z) are also useful as diagnostic and therapeutic agents. The present sequence represents a human amino acid sequence associated with bladder cancer, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes nucleic acids (I) associated with bladder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acids, and encoded proteins, from bladder cancer tissue, useful for diagnosis, treatment and in screening for specific binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gape
                                                                  Gape

/note="Organ: mixed (see below); Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site 1: Not I; Site 2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NBHW, pregnant uterus NBHPU, and fetal heart NBHH19W) were mided in vitro. Pollowing HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools 5,000 clones made from the same 3 libraries. The pools 340488-345479, and 484488-489479."

NDHPU, and fetal heart NDHH19W) were mixed, and 8s circles were made in vitro. Pollowing HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5.00 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223, 340488-345479, and 484488-489479."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description

; Patent No. 6607879
; GENERAL INFORMATION:
; APPLICANT: Cocks, Benjamin G.
APPLICANT: Susan G. Stellhamer
APPLICANT: Jeffrey J. Sellhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF BLOOD CELL GENE
TITLE OF INVENTION: EXPRESSION
TITLE OF INVENTION: EXPRESSION
NUMBER OF SEQUENCES: 1508
CORRESPONDENCE ADDRESS:
STREET: 3174 FORTER DRIVE
CITY: PALO ALTO
STATE: CALIFORNIA

The specification describes a method and system for accurately presenting a state of a cell. The method comprises obtaining a time-lapse profile of the cell by time-lapse monitoring of a gene state associated with at least one gene derived from the cell, and presenting the time-lapse profile. The gene comprises a transcription control sequence, and the gene state includes expression of the gene. The method and system are useful presenting a state of a cell. The method can allow the elucidation of key protein-protein interactions suitable for targeting by drug screening protocols. The method is useful for diagnosing or treating a classe, e.g. cancer, infectious disease due to viruses or bacteria, allergy, hypertension, hyperlipsemia, diabetes, cardiac disease, cerebral infarction, dementia, obesity, arteriosclerosis, infertility, mental and nervous diseases, cataract, progeria, or hypersensitivity to ultraviolet radiation. The present sequence encodes human fibromectin l. Bovine fibromectin was used as a candidate for an acting substance. The actin acting substance was used with transfection reagents and amplified the course of the
